Subject: RE: Wet Cake Response

Thanks Jamie!

Ex. 5 DP 7(A)

We can further discuss this issue next Thursday morning when I have my biweekly coordination meeting with both of you. Fortunately, I scheduled them one after the other.

Wilfredo Rosado-Chaparro, aka Wilo

Erin and Jamie – Please see the email from Michael Goodis in OPP. His group intends to respond to a request for assistance from Tim Creger, Neb Dept of Ag with the draft highlighted below.

He wanted R7 to be aware and to ensure it doesn't interfere with what we're working on. Please reply to all to keep everyone in the loop.

Thanks!

Hi John

It was good talking with you. As discussed, below is the information we received from Tim on this issue and our draft response.

I also forwarded this information to Jeff so he is in the loop and is copied in this message. Let me know what you think and how best to proceed. Thanks

Michael L. Goodis, P.E.

Hi Jeff

Below is the incoming request/background from NE along with our draft response that I referred to in my voicemail to you.

Don't know if this is something your office is aware of or not. Let's talk when you get a chance.

Michael L. Goodis, P.E.
Director, Registration Division (RD)
Office of Pesticide Programs (OPP)

Subject: Summary of treated seed wetcake issue in Nebraska

MEMORANDUM

TO: Meredith Laws, U.S. EPA
FROM: Tim Creger, Nebraska Dept. of Agriculture
RE: Wetcake Material Resulting from Ethanol Extraction Using Treated Seed

In order to provide an abbreviated summary of the larger case report forwarded to you today, I am providing the following information.

The central issue is that an ethanol plant located in Mead, NE is using discarded treated seed (mostly corn but also some grain sorghum) as a carbohydrate source. The resulting fermentation results in ethanol sold as a fuel additive and "wetcake" solids that are then distributed as a wetcake soil conditioner that is land applied to farm fields. The wetcake biosolids are heavily contaminated with pesticide residues.

The ethanol plant started generating ethanol using treated seed on January 9, 2015, and accumulated the wetcake solids for three years before deciding to land apply it as a soil conditioner. In Nebraska, any material applied to a farm field must either be classified as a fertilizer, unmanipulated animal manure, or a soil conditioner. Since the wetcake was unpredictable and variable in nutrient analysis it was unable to be classified and sold as a fertilizer, and so the company chose to register a label for the product as a soil conditioner which does not have to make plant nutrition claims.

Because the wetcake had been stockpiled for over three years without further conditioning, it developed an overwhelming odor that quickly resulted in citizen complaints whenever it was applied in a field near an occupied structure. Those odor complaints started in spring of 2018, shortly after the wetcake was being moved to the field and land applied. The odor complaints were received every time the company land applied more product with a significant number of complaints filed between the end of December 2018 and early March 2019. NDA became involved in the situation on January 28, 2019.

An unofficial sample of wetcake that had been moved to a field but not yet land applied was collected by the NDA on 1-29-19 and tested for neonicotinoid, pyrethroid and organophosphate insecticides, and strobilurin and triazole fungicides. Four fungicides, three insecticides and one herbicide were detected and reported by the lab on March 1, 2019. NDA then decided to collect an official sample on March 29, 2019 of fresh wetcake collected immediately after the fermentation process and before moving the material to stockpile storage. The lab analysis was reported on April 19, 2019 with significant concentrations of the following pesticides reported: azoxystrobin, clothianidin, fludioxonil, metalaxyl, prothioconazole, tebuconazole, thiamethoxam and trifloxystrobin, and a low concentration of imidacloprid and selenium (this is the only heavy metal reported as detected).

Ex. 7(A)

Ex. 7(A)

It should be noted that the wetcake soil conditioner is being land applied at rate of 15 to 20 tons per acre, which is explained further in my full case report narrative.

Sincerely,

Tim Creger
